

Patient Chest X-Ray Report

Patient Name: John Doe

Date of Birth: 1985-06-12

Study Date: 2026-04-07

Exam: Chest X-ray (PA and lateral views)

Referring Physician: Dr. A. Smith

Clinical Indication

Persistent cough and mild shortness of breath for 5 days.

Findings

- Cardiomedial silhouette is within normal limits in size and contour.
- Lungs are well expanded.
- Patchy opacity noted in the right lower lobe, suggestive of focal consolidation.
- No evidence of pleural effusion or pneumothorax.
- Bony structures appear intact without acute abnormality.

Impression

- **Right lower lobe consolidation**, most consistent with **community-acquired pneumonia** in the appropriate clinical setting.
- No acute cardiopulmonary abnormality otherwise identified.

Recommendations

- Clinical correlation recommended.
- Consider follow-up imaging in 6–8 weeks to ensure resolution
